**Idea no 1 :** A trustable online house booking system

**Project Name :** **TO-LET**

**Description :**

The owner of house can easily upload his house condition ,room pictures , room environment etc in his own slot .

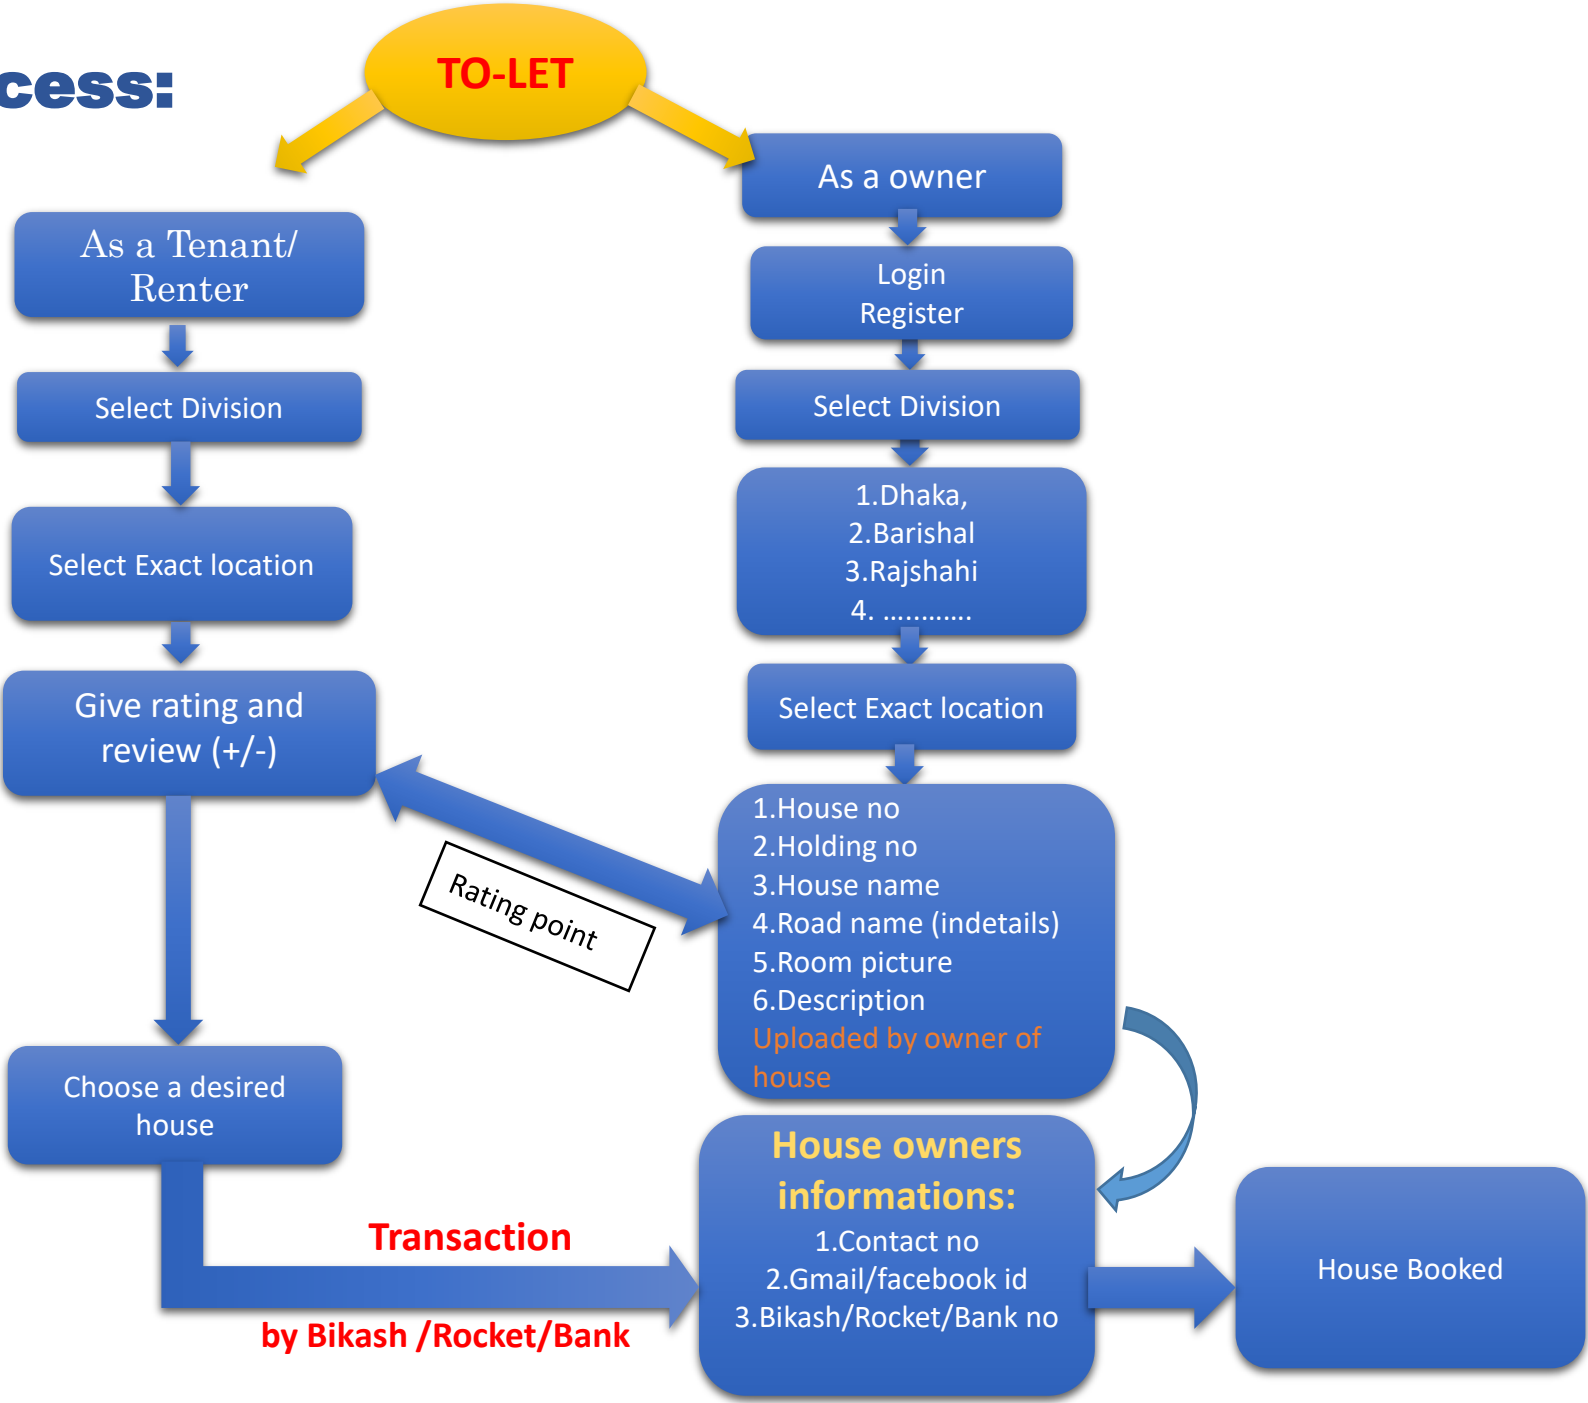

My project works as a trustable house booking system throughout our country .

Users can select their region and search if there is any room/sublet is available in their location or their desired place .

Users can easily comment of each house and and give a rating/point in each house .If any house is disliked by themselves the house get negative rating .Beside if they like the house environment ,room condition they will give plus point . By seeing the rating point of the room this others user can easily booked those room .

There are some trending page in my projects for each district in each division which contains the most liked room.

Working process:

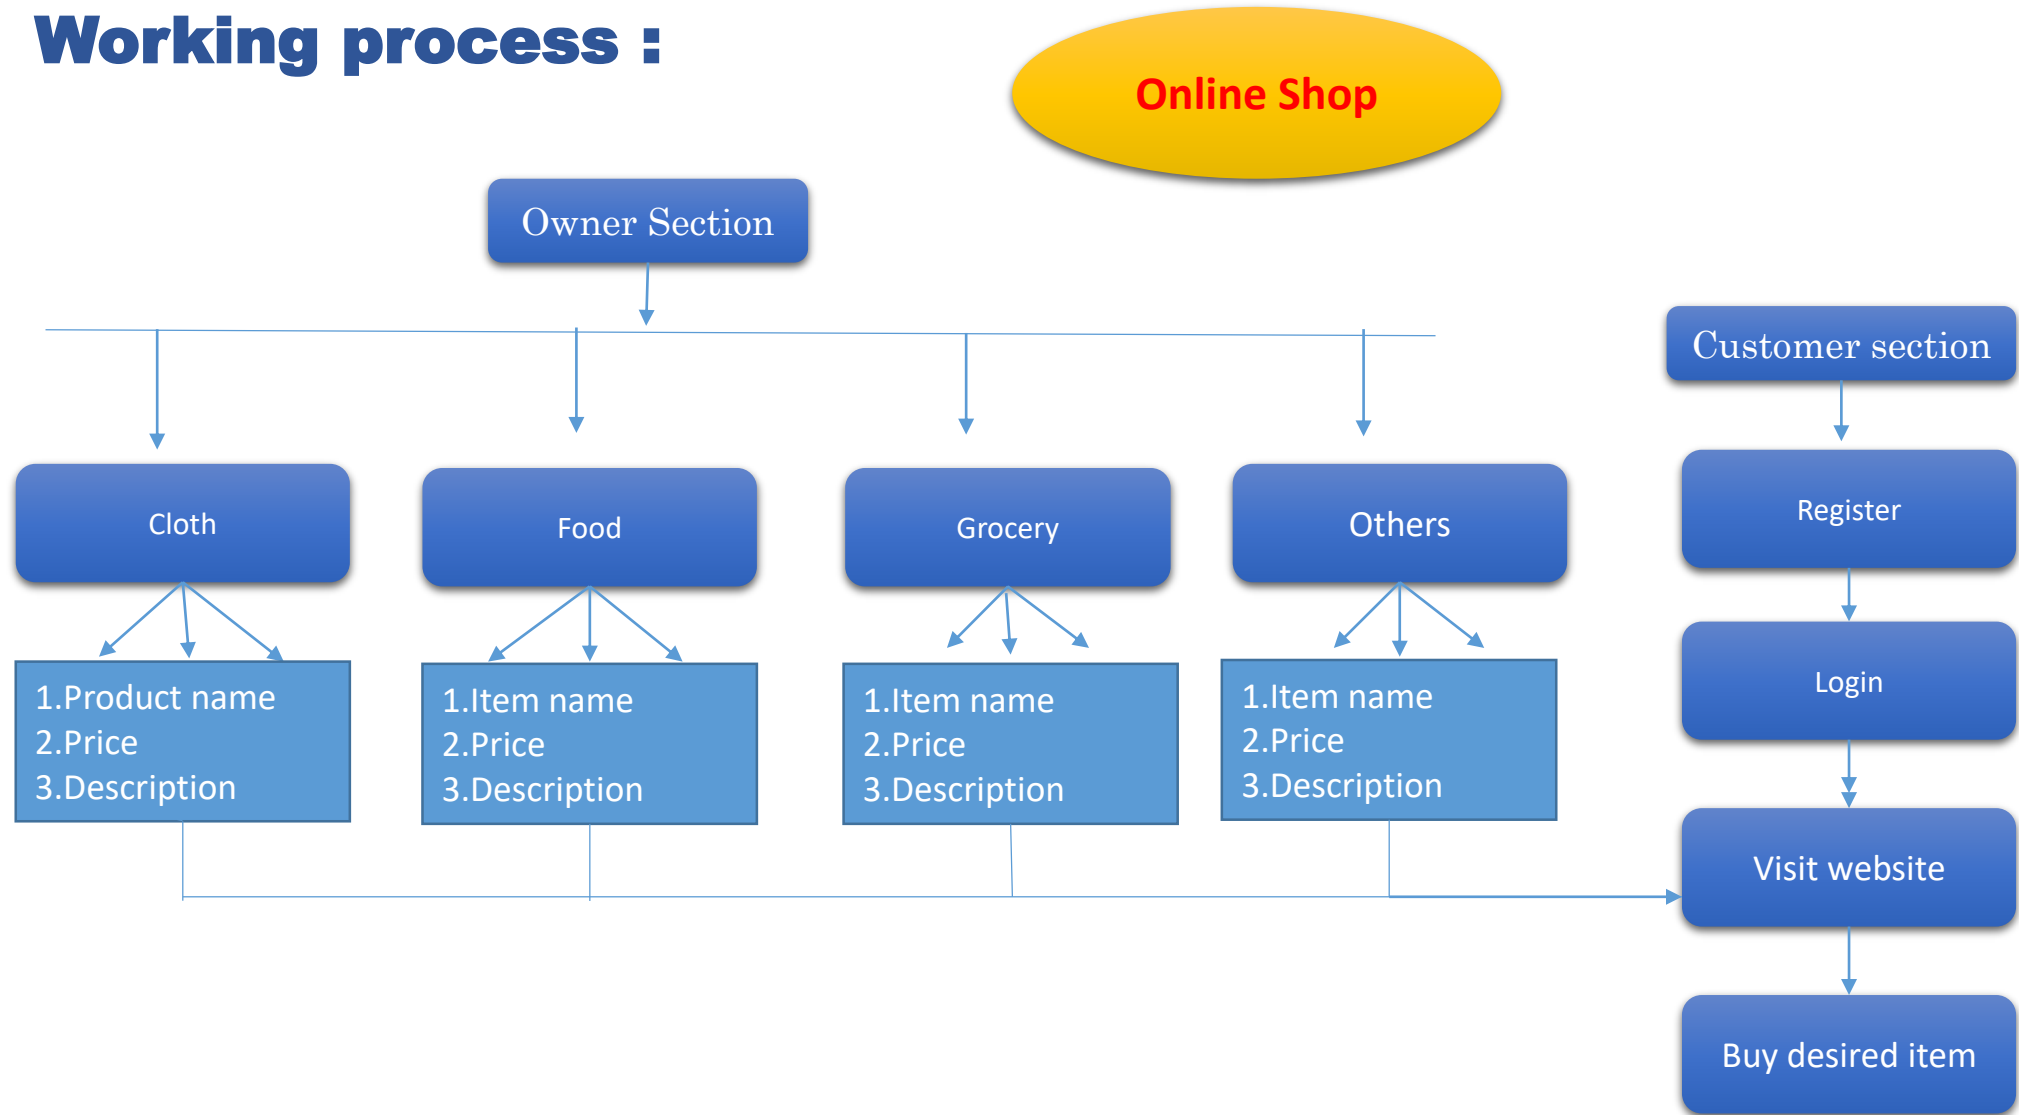

**Idea no 2 :** Online shopping center website

**Project Name :** **ONLINE-SHOP**

**Description :**

In this project owner of a shop can easily sell his goods or grocery item by using this website. The shop owner upload his items in different different section sothat buyers can easily search their desired item.

# Working process :

**Idea no 3 :** Online shopping center website
