Idea no 1 : Anti Ragging website for RUET

Project Name : STOP RAGGING

Description :

Ragging involves abuse, humiliation, or harassment of new entrants or junior students by the senior students. It often takes a malignant form wherein the newcomers may be subjected to psychological or physical torture.

In this project I want to implement my own idea through a website by which RUET authority can easily know how much rag occurred in our campus. (Authority can easily detect who is the victim and who ragged others).

By taking victims data from this website database, University administration can take necessary action to stop ragging.

Working process

STOP RAGGING
It's a crime

-> Continue as a student(victim)
-> Continue as a Authority
-> Trending post(most dangerous ragging story)

1.Victim section

Log in with Roll no

Victims info
1.Select University
2.Name
3.Dept
4.Series
(described by victim)

Seniors Info
(who ragged other)
1.He/her/their name
2.Dept
3.Series
(described by victim)

Rag place & Description :
......
......
(described by victim)

3.Trending Section Page
(most dangerours ragging incidence)

Total post

RUET-1 (Public page)

....
Post no :68
Description: (without victim info)
....
Post no : 69
....

RUET-2 (Authority page)

Post no :68
Description:…
Victim info…
Ragger info....

Post no : 69
Description:…
Victim info…
Ragger info…

2.RUET Authority Database

Log in

Take action

How my project works ?
=>

Victim student can easily share his incident in this website by hiding his/her information.

A general student or teacher easily visit the trending page and know how and where ragged occurred in our campus. Here they doesnot know who is the victim (victim info only know authority) and who ragged others.

But RUET authority easily get the informations of victim ,occurrence place , criminals information etc from the website hidden database . Thus they can know how much and where ragging scenario occurred in RUET . Now its time to take action !!!.

Idea no 2 : A trustable online house booking system

Project Name : TO-LET

Description :

The owner of house can easily upload his house condition ,room pictures , room environment etc in his own slot .

Here I want to implement a web-project that works as a trustable house booking system throughout our country . It includes   all house owner and tenant for all district .

Basic features :

-> Users can select their region and search if there is any house/room/sublet is available in their location or their desired place .

-> Users can easily comment of each house and and give a rating point and review in each house .If any house is disliked by themselves the house get negative rating .Beside if they like the house environment ,room condition they will give plus point . By seeing the rating point of the room this others user can easily booked those room .

-> There are some trending page in my projects for each district in each division which contains the most liked room.

WORKING PROCESS

TO-LET

As a Tenant/Renter

↓

Select Division

↓

Select Exact location

↓

Give rating and review (+/-)

↓

Choose a desired house
